PROFESSIONAL SUMMARY

Results-driven Site Reliability Engineer and active open-source contributor with over 5 years of proven experience architecting, scaling, and automating cloud infrastructures across GCP, AWS, and Azure. Specialized in Kubernetes (GKE), GitOps (ArgoCD), Infrastructure as Code (Terraform, Ansible), and building highly resilient CI/CD pipelines. Demonstrated history of achieving 99.99% system uptime SLAs, driving sweeping cost optimizations (saving \$250K+ per quarter), and significantly reducing Mean Time to Resolution (MTTR) through advanced observability and auto-healing solutions. Seeking to leverage deep expertise in cloud ecosystems and DevOps methodologies to scale enterprise-grade platforms at a top-tier technology organization.

TECHNICAL SKILLS

- **Cloud Platforms:** Google Cloud Platform (GCP), Amazon Web Services (AWS), Microsoft Azure
- **Containerization & Orchestration:** Kubernetes (GKE/EKS), Docker, Helm, Container Lifecycle
- **Infrastructure as Code (IaC) & GitOps:** Terraform, Ansible, ArgoCD, Chef
- **CI/CD & Automation:** Jenkins, GitHub Actions, Azure DevOps, Git
- **Monitoring, Observability & Incident Response:** Prometheus, Grafana, Dynatrace, New Relic, PagerDuty
- **Systems & Networking:** Linux (OS Internals, Performance Tuning), Nginx, TCP/IP, DNS, Load Balancing
- **Programming & Scripting:** Python, Bash/Shell Scripting, Golang (Go, Basic), JavaScript, Angular

PROFESSIONAL EXPERIENCE

- **BlackLine** Bengaluru, KA
Site Reliability Engineer June 2024 - Present
 - Engineered and maintained high-availability production infrastructure, consistently achieving and exceeding 99.9% uptime SLAs while executing robust on-call incident management protocols and blameless post-mortems.
 - Architected petabyte-scale object storage management across GCP (GCS) and AWS (S3), implementing S3 Intelligent-Tiering, cross-region replication (CRR), and strict IAM/bucket policies to ensure SOC 2/GDPR compliance and reduce storage footprint.
 - Spearheaded a massive cloud cost-optimization initiative, involving instance right-sizing, storage tiering, and database upgrades, generating over \$250,000 in operational savings within a single quarter.
 - Managed Kubernetes workloads utilizing GitOps principles with ArgoCD and Helm, streamlining deployment processes, enabling automated drift detection, and reducing manual release intervention by 40%.
 - Invented and deployed an intelligent auto-healing system that seamlessly integrates New Relic telemetry, PagerDuty alerts, and Python/Bash automation tools to instantly remediate known failure states, drastically reducing operational toil and MTTR.
 - Led the zero-downtime structural migration of Apache NiFi clusters from Chef-based configuration management to Ansible, subsequently orchestrating automated multi-region NiFi deployments.
- **Liferay** Bengaluru, KA
Associate Site Reliability Engineer Dec 2022 - June 2024
 - Administered and scaled large-scale Google Kubernetes Engine (GKE) clusters, ensuring optimal resource allocation, security compliance, and fault tolerance for mission-critical portals.
 - Conducted deep-dive troubleshooting into Linux OS internals, network stacks, and resource scheduling to optimize application performance and stability.
 - Elevated system observability by instrumenting Prometheus, Grafana, and Dynatrace, establishing proactive thresholds and alerts that addressed performance degradation prior to customer impact.
 - Restructured and maintained Jenkins CI/CD pipelines, proactively identifying build-stage bottlenecks and troubleshooting faulty deployment mechanics to stabilize daily release trains.
 - Executed detailed GKE cluster performance analysis to identify compute inefficiencies; implemented node auto-provisioning and proactive node-scale-down strategies to achieve a sustainable 20% footprint cost reduction.
 - Wrote custom Python and Bash automation scripts to replace tedious daily operational tasks, saving the infrastructure team 10+ hours per week.
- **Capgemini** Mumbai, MH
Senior Software Engineer June 2019 - August 2021

- Provisioned, secured, and scaled enterprise-grade AWS and Azure cloud infrastructures leveraging VPCs, EC2/VMs, and auto-scaling groups for global client deployments.
- Troubleshoot and resolved complex network and routing issues, including Load Balancer algorithms, DNS resolution, and TCP/IP bottlenecks, ensuring uncompromised connectivity and low latency.
- Introduced and standardized Infrastructure as Code practices using Git-managed ARM templates and robust scripting resources to version-control primary infrastructure components.
- Collaborated within cross-functional Agile teams to design and develop robust front-end user interaction portals using Angular (6+), JavaScript, HTML5, and CSS3, bridging user experience gaps with backend systems.
- Integrated seamless code delivery utilizing Azure DevOps CI/CD pipelines, minimizing integration code-conflicts.

KEY TECHNICAL PROJECTS

- **Automated Storage Compliance Controller (Python & AWS S3):** Developed a Python-based automation tool to proactively audit AWS S3 buckets across the organization. Enforced encryption standards, configured intelligent lifecycle policies for cost optimization, and ensured strict IAM access controls for data security.
- **GitOps Fleet Manager (ArgoCD, Helm & Kubernetes):** Architected a centralized GitOps deployment workflow using ArgoCD and custom Helm charts to synchronize microservices across multiple Kubernetes clusters, providing automated drift detection and rapid rollback capabilities.
- **Enterprise K8s Automation Lab (Ansible & Terraform):** Designed a cloud-hybrid testing environment defined via Infrastructure as Code. Utilized Terraform to bootstrap networks and Ansible to configure an operational Kubernetes cluster capable of handling microservices.
- **Active Open Source Contributor (Ansible, ArgoCD, Jenkins):** Committed and actively maintaining upstream Pull Requests for major DevOps/SRE tools. Contributions include improving module idempotency in Ansible (Keycloak), enhancing UI namespace filtering in ArgoCD, and debugging core plugins for Jenkins.

CERTIFICATIONS

- **HashiCorp Certified: Terraform Associate (003)** | HashiCorp
- **Google Certified Professional Cloud Architect** | Google Cloud
- **Microsoft Certified: DevOps Engineer Expert (AZ-400)** | Microsoft Azure
- **AWS Certified Solutions Architect Associate** | Amazon Web Services
- **AWS Certified Cloud Practitioner** | Amazon Web Services

EDUCATION

- **Reva Institute of Technology and Management** Bengaluru, KA
Bachelor of Engineering *June 2018*
